ENGLISH LANGUAGE

Directions (41-50): Read the following passage very carefully and answer the questions given below it.

At one time it would have been

impossible to imagine the integration of different religious thoughts, ideas and ideals. That is because of the closed society, the lack of any communication or interdependence on other nations. People were happy and content amongst themselves; they did not need any more. The physical distance and cultural barriers prevented any exchange of thoughts and beliefs. But such is not the case today. Today, the world has become a much smaller place, thanks to the adventures and miracles of science. Foreign nations have become our next-door neighbours. Mingling of population is bringing about an interchange of thought. We are slowly realising that the world is a single co-operative group. Other religions have become forces with which we have to **reckon** and we are seeking for ways and means by which we can live together in peace and harmony. We cannot have religious unity and peace so long as we assert that we are in possession of the light and all others are groping in the darkness. That very assertion is a challenge to a fight. The political ideal of the world is not so much a single empire with a homogeneous civilization and single communal group as a brotherhood of free nations differing **profoundly** in life and mind, habits and institutions, existing side by side in peace and order, harmony and co-operation and each contributing to the world its own unique and specific best, which is irreducible to the terms of the others.

The cosmopolitanism of the eighteenth century and the nationalism of the nineteenth are combined in our ideal of a world commonwealth, which allows every branch of the human family to find freedom, security and self-realisation in the larger life of mankind. I see no hope for the religious future of the world, if this ideal is not extended to the religious sphere also. When two or three different systems claim that they contain the revelation of the very core and centre of truth and the acceptance of it is the exclusive pathway to heaven, conflicts are inevitable. In such conflicts one religion will not allow others to steal a march over it and no one can gain ascendancy until the world is reduced to dust and ashes. To obliterate every other religion than one's own is a sort of Bolshevism in religion which we must try to prevent. We can do so only if we accept something like the Indian solution, which seeks the unity of religion not in a common creed but in a common quest. Let us believe in the unity of spirit and not of organization, a unity which secures ample liberty not only for every individual but for every type of organised life which has proved itself effective.

For almost all historical forms of life and thought can claim the sanction of experience and so the authority of God. The world would be a much poorer thing if one creed absorbed the rest. God wills a rich harmony and not a colourless uniformity. The comprehensive and synthetic spirit of Indianism has made it a mighty force with a thousand waving arms each fulfilling its function and all directed by

the spirit of God - each thing in its place and all associated in the divine concert. Making, with their various voices and even dissonance, as Heraclites would say, the most exquisite harmony should be our ideal.

41. According to the passage, religious unity and peace can be obtained if
- (1) We believe that the world is a single co-operative group
 - (2) We do not assert that we alone are in possession of the real knowledge
 - (3) We believe in a unity of spirit and not of organisation

Directions (61-70): In the following passage, there are blanks, each of which has been numbered. These numbers are printed below the passage and against each, five words are suggested, one of which fits the blank appropriately. Find out the appropriate word in each case.

After ten years of 61 inflation, prices have spiked 7.5% in the third week of July. This looks scary-after all, Indians had got used to prices crawling up by 2% in the last two years, and a 10-year average inflation rate of about 5% - but you shouldn't worry. This burst of inflation is the result of three factors that have come together unexpectedly and are unlikely to 62 for long and are unlikely to 63 up

together again: an 64 rise in global oil prices, a monsoon that arrived late and a spike in global metal prices. North Sea crude has crossed \$42 per barrel, driven up by low petroleum 65 and soaring demand in the US as war production heats up. Oil markets are also spooked by the 66 of Russian oil supplies falling on the back of the Yukos-Sibneft probe. There's little that the government can do to 67 users from soaring oil prices - indeed, it shouldn't, if it wants to 68 efficiency. Higher transport costs have pushed up rates of vegetables and fruits. Farm produce could also get affected by rains that arrived too late for kharif sowing. China is 69 up steel and other metals from all over the world to 70 a construction boom ahead of the Olympics, making metal prices soar all over the world, and sparking inflation in India.
