

# COMPUTER SCIENCE

## Paper – 2

### (PRACTICAL)

(Maximum Marks: 30)

(Time allowed: Three hours)

(Candidates are allowed additional 15 minutes for only reading the paper.

They must NOT start writing during this time.)

---

**The total time to be spent on the Planning Session and the Examination Session is three hours.**

*Planning session: 90 minutes*

*Examination session : 90 minutes*

**Note: Candidates are to be permitted to proceed to the Examination Session only after 90 minutes of the Planning session are over.**

---

*This paper consists of **three** problems from which candidates are required to attempt **any one** problem.*

Candidates are expected to do the following:

1. Write an algorithm for the selected problem. [3]  
(Algorithm should be expressed clearly using any standard scheme such as pseudo code or in steps which are simple enough to be obviously computable.)
2. Write a program in **JAVA** language. The program should follow the algorithm and should be logically and syntactically correct. [5]
3. Document the program using mnemonic names / comments, identifying and clearly describing the choice of data types and meaning of variables. [2]
4. Code / Type the program on the computer and get a printout ( hard copy ). Typically, this should be a program that compiles and runs correctly. [2]
5. Test run the program on the computer using the given sample data and get a printout of the output in the format specified in the problem. [5]
6. Viva-Voce on the **Selected Problem**. [3]

In addition to the above, the practical file of the candidate containing the practical work related to programming assignments done during the year is to be evaluated as follows:

- Programming assignments done throughout the year (by the teacher) [5]
- Programming assignments done throughout the year (by the Visiting Examiner) [5]

Solve **any one** of the following Problems.

### Question 1

A **Goldbach** number is a positive even integer that can be expressed as the sum of two odd primes.

Note: *All even integer numbers greater than 4 are Goldbach numbers.*

**Example:**  $6 = 3 + 3$

$$10 = 3 + 7$$

$$10 = 5 + 5$$

Hence, 6 has one odd prime pair 3 and 3. Similarly, 10 has two odd prime pairs, i.e. 3 and 7, 5 and 5.

Write a program to accept an even integer 'N' where  $N > 9$  and  $N < 50$ . Find all the odd prime pairs whose sum is equal to the number 'N'.

Test your program with the following data and some random data:

#### Example 1:

**INPUT:** N = 14

**OUTPUT:** PRIME PAIRS ARE: 3, 11  
7, 7

#### Example 2:

**INPUT:** N = 30

**OUTPUT:** PRIME PAIRS ARE: 7, 23  
11, 19  
13, 17

#### Example 3:

**INPUT:** N = 17

**OUTPUT:** INVALID INPUT. NUMBER IS ODD.

#### Example 4:

**INPUT:** N = 126

**OUTPUT:** INVALID INPUT. NUMBER OUT OF RANGE.

## Question 2

Write a program to declare a matrix  $A[ ][ ]$  of order  $(M \times N)$  where 'M' is the number of rows and 'N' is the number of columns such that the values of both 'M' and 'N' must be greater than 2 and less than 10. Allow the user to input integers into this matrix. Perform the following tasks on the matrix:

- Display the original matrix.
- Sort each row of the matrix in ascending order using any standard sorting technique.
- Display the changed matrix after sorting each row.

Test your program for the following data and some random data:

### Example 1:

**INPUT:**           M = 4  
                  N = 3

ENTER ELEMENTS OF MATRIX

```
11 -2  3
 5  16 7
 9  0  4
 3  1  8
```

### OUTPUT:

ORIGINAL MATRIX

```
11 -2  3
 5  16 7
 9  0  4
 3  1  8
```

MATRIX AFTER SORTING ROWS

```
-2  3  11
 5  7  16
 0  4  9
 1  3  8
```

### Example 2:

**INPUT:**           M = 3  
                  N = 3

ENTER ELEMENTS OF MATRIX

```
22  5  19
 7  36 12
 9  13  6
```

**OUTPUT:**

ORIGINAL MATRIX

```
22  5  19
 7  36 12
 9  13  6
```

MATRIX AFTER SORTING ROWS

```
 5  19 22
 7  12 36
 6   9 13
```

**Example 3:**

**INPUT:**           M = 11  
                  N = 5

**OUTPUT:**

MATRIX SIZE OUT OF RANGE

**Question 3**

The names of the teams participating in a competition should be displayed on a banner vertically, to accommodate as many teams as possible in a single banner. Design a program to accept the names of N teams, where  $2 < N < 9$  and display them in vertical order, side by side with a horizontal tab (i.e. eight spaces).

Test your program for the following data and some random data:

**Example 1:**

**INPUT:**           N = 3  
                  Team 1: Emus  
                  Team 2: Road Rols  
                  Team 3: Coyote

**OUTPUT:**

```
E      R      C
m      o      o
u      a      y
s      d      o
                t
                R      e
                o
                l
                s
```

**Example 2:**

**INPUT:** N = 4  
Team 1: Royal  
Team 2: Mars  
Team 3: De Rose  
Team 4: Kings

**OUTPUT:**

R	M	D	K
o	a	e	i
y	r		n
a	s	R	g
l		o	s
		s	
		e	

**Example 3:**

**INPUT:** N = 10

**OUTPUT:** INVALID INPUT
