2-Marks

Q.NO	ANSWER	MARKS
16	<ul style="list-style-type: none"> • Impact printers print with striking of hammers or pins on ribbon. These printers can print on multi-part (using carbon papers) by using mechanical pressure. For example, Dot Matrix printers and Line matrix printers are impact printers. • A Dot matrix printer that prints using a fixed number of pins or wires. • Line matrix printers use a fixed print head for printing. Basically, it prints a page-wide line of dots. 	1 ½ ½
17	The Program counter (PC) is a special register in the CPU which always keeps the address of the next instruction to be executed.	1
18	<ul style="list-style-type: none"> • It is used in computers and laptops that allow same data and applications to be accessed by multiple users at the same time. • The users can also communicate with each other. Windows, Linux and UNIX are examples for multi-user Operating System. 	1 1
19	j=20, p=4 p=p*++j; p=4*21; p=84 <div style="border: 1px dashed black; padding: 5px; display: inline-block; margin-left: 20px;"> <p style="text-align: center;">PREPARED BY: T.THIRUMALAI. M.Sc(CSI)..B.Ed.. 9750827717</p> </div>	2
20	A person or program collects login and password information from a legitimate user to illegally gain access to others' account(s) is called Harvesting .	2
21	data-type variable [row-size][column-size]; Example: int a[2][3];	1 1
22	Disadvantages of OOP: Size: Object Oriented Programs are much larger than other programs. Effort: Object Oriented Programs require a lot of work to create. Speed: Object Oriented Programs are slower than other programs, because of their size.	2
23	Class member: Class comprises of members. Members are classified as Data Members and Member functions. Data members are the data variables that represent the features or properties of a class. Member functions are the functions that perform specific tasks in a class. Member functions are called as methods, and data members are also called as attributes.	2
24	<pre>int i=5; while(i<=50) { cout<<i<<" "; i+=5; } O/P: 5,10,15,.....,50</pre>	2

Components of a Computer (Block Diagram)

Input Unit

Input unit is used to feed any form of data to the computer, which can be stored in the memory unit for further processing. Example: Keyboard, mouse, etc.

Central Processing Unit

CPU is the major component which interprets and executes software instructions. It also controls the operation of all other components such as memory, input and output units. It accepts binary data as input, process the data according to the instructions and provide the result as output. The CPU has three components which are Control unit, Arithmetic and logic unit (ALU) and Memory unit.

Arithmetic and Logic Unit

The ALU is a part of the CPU where various computing functions are performed on data. The ALU performs arithmetic operations such as addition, subtraction, multiplication, division and logical operations. The result of an operation is stored in internal memory of CPU. The logical operations of ALU promote the decision-making ability of a computer.

Control Unit

The control unit controls the flow of data between the CPU, memory and I/O devices. It also controls the entire operation of a computer.

Output Unit

An Output Unit is any hardware component that conveys information to users in an understandable form. Example: Monitor, Printer etc.

Memory Unit

The Memory Unit is of two types which are primary memory and secondary memory. The primary memory is used to temporarily store the programs and data when the instructions are ready to execute. The secondary memory is used to store the data permanently. The Primary Memory is volatile, that is, the content is lost when the power supply is switched off. The Random Access Memory (RAM) is an example of a main memory. The Secondary memory is non volatile, that is, the content is available even after the power supply is switched off. Hard disk, CD-ROM and DVD ROM are examples of secondary memory.

(or)

(i) $(1920)_{10} = (3600)_8$ get through divide the values by 8 and write the remainder from bottom to top the values.

(ii) $(1920)_{10} = (11110000000)_2$ get through divide the values by 2 and write the remainder from bottom to top the values.

(iii) $(8BC)_{16} = (1000\ 1011\ 1100)_2$ get through write the equivalent 4bits binary digit values.

(iv) $(6213)_8 = (110\ 010\ 001\ 011)_2$ get through write the equivalent 3bits binary digit values.

37	<p>The Object Oriented Programming has been developed to overcome the drawbacks of procedural and modular programming. It is widely accepted that object-oriented programming is the most important and Powerful way of creating software. The Object-Oriented Programming approach mainly encourages:</p> <p>Modularization: where the program can be decomposed into modules.</p> <p>Software re-use: where a program can be composed from existing and new modules.</p> <p>Main Features of Object Oriented Programming</p> <ul style="list-style-type: none"> • Data Abstraction • Encapsulation • Modularity • Inheritance • Polymorphism <p>(or)</p>	3
	<p>Output: Enter the number 2 The square of 2 is 4 The square of 2 is 8</p>	5
38	<p>a) Precedence and Associativity of an operator cannot be changed. b) No new operators can be created, only existing operators can be overloaded. c) Cannot redefine the meaning of an operator's procedure. You cannot change how integers are added. Only additional functions can be to an operator. d) Overloaded operators cannot have default arguments. e) When binary operators are overloaded, the left hand object must be an object of the relevant class</p> <p>(or)</p>	5
	<p>Output: Enter data Name:Raman Code:1305 Experience: 25 Display Data Name:Raman Code:1305 Experience:25 Years</p> <pre>#include<iostream> #include<string> using namespace std; class Employee { private: char name[20]; int code; public: void getdata(); void display();</pre> <div style="border: 1px solid black; border-radius: 10px; background-color: #d4edda; padding: 10px; width: fit-content; margin: 10px auto;"> <p style="text-align: center;">PREPARED BY: T. THIRUMALAI, M.Sc(CS).,B.Ed., 9750827717</p> </div>	5

```

};
class staff: public Employee
{
private:
int ex;
public:
void getdata();
void display();
};
void Employee::getdata()
{
cout<<"Name:";
gets(name);
cout<<"Code:";
cin>>code;
}
void Employee::display()
{
cout<<"Name:"<<name<<endl;
cout<<"Code:"<<code<<endl;
}
void staff::getdata()
{
Employee::getadata();
cout<<"Experience:";
cin>>ex;
}
void staff::display()
{
Employee::display();
cout<<"Experience:"<<ex<<" Years"<<endl;
}
int main()
{
staff s;
cout<<"Enter data"<<endl;
s.getdata();
cout<<"Display Data"<<endl;
s.display();
return 0;
}

```

(This model program is in Book page no: 305 to 307 in Vol –II)
