class - 14

## Assignment

1. Complete the flow chart on textbook page no. 33.

Ans)

2. Prepare a note on the events of body balancing.

Ans) Semicircular canals, vestibule and vestibular nerve are the parts of the ear which help in body balance.

Body balance is maintained in accordance with the movement of the head. Movements of the head bring about the movement of the endolymph present inside the vestibule and the semicircular canals. This causes movement of the sensory hair cells and generate impulses.
