Assignment

1) How Periodic winds differ from Planetary winds?

Ans) Planetary winds blow through out the year between the global pressure belts.

But periodic winds are winds that repeat at regular intervals of time and can be seasonal or diurnal. Monsoon winds are example for seasonal winds. Mountain and valley breeze and land and sea breeze are examples of diurnal winds.

2) What are the factors that responsible for the formation of the monsoon winds?

Ans) * Monsoon is the seasonal reversal of wind in a year.

* monsoon means the wind that change direction in accordance with season.

* The factors are : 1) The apparent movement of the sun

2) Coriolis force

3) Differences in heating
