

- 1) What are the major roles played by body fluids in defense mechanism?
- 2) Complete the following table

White Blood Cells	Defense Action
Neutrophil	
	Stimulates other white blood cells. Dilates the blood vessels.
Eosinophil	
Monocyte	
	Identifies and destroys germs specifically.

- 3) Observe the illustration and prepare a flow chart of inflammatory response

- 4) How does inflammatory response help in defense against pathogens?
- 5) Explain the following terms
 - a) Phagocytosis
 - b) Phagocyte
- 6) Give examples for white blood cells which are phagocytes
- 7) Prepare a flow chart containing various stages of phagocytosis
