

Standard 10	Subject: Physics	Medium:ENGLISH	Date:19/12/2020
class10	REFRACTION OF LIGHT	Worksheet No :5.2	CLASS LINK

1. Which is the incident ray on the surface of separation AB?
2. Which is the incident ray on the surface of separation CD?
3. Name the angle of incidence and angle of refraction on the surface of separation AB?

III Match the figures with the appropriate statements .

No deviation take place in the Case of a light ray falling normally on a medium

When light passes obliquely from a medium of higher optical density to a medium of lower optical density, the refracted ray deviates away from the normal

When light is incident obliquely, from a medium of lower optical density to a medium of greater optical density, the refracted ray deviates towards the normal

III Light ray enters from air to glass

No	പതന കോൺ i	അപവർത്തന കോൺ r	Sin i	Sin r	Sin i/sin r
1	20°	13°	0.34	0.22	1.5

2	45°	28°	0.7	0.47	1.5
3	60°	35°	0.80	0.57	1.5

Light ray enters from glass to air

No	i	r	Sin i	Sin r	Sin i/sin r
1	10°	15°	0.17	0.26	0.7
2	14°	23°	0.26	0.39	0.7
3	20°	39°	0.34	0.51	0.7

1. From the above table, analyse the change in angle of incidence and angle of refraction when light ray passes from denser medium to rarer medium and vice versa.

2. State the Snell's law and refractive index

IV State Laws of Refraction.
