## **ASSIGNMENT**

- Q) EXPRESS the equation for workdone in an isothermal process in terms of pressure W=2.303  $\mu$  RTlog  $\frac{V_z}{V_c}$
- Ans) Suppose 1 mole of gas is enclosed in isothermal container. Let  $\mathbf{P}_1, \mathbf{V}_1, \mathbf{T}$  be initial pressure, volumes and temperature. Let expand to volume  $\mathbf{V}_2$  & pressure reduces to  $\mathbf{P}_2$  & temperature remain constant. Then, work done is given by  $\mathbf{W} = \int_{\mathbf{V}_1}^{\mathbf{V}_2} \mathbf{P} \, d\mathbf{V}$

as 
$$PV = RT$$
 (n = mole)

$$\mathbf{P} = \frac{\mathbf{RT}}{\mathbf{V}}$$

$$\mathbf{W} = \int_{V_1}^{V_2} rac{\mathbf{R}\mathbf{T}}{\mathbf{V}} d\mathbf{V}$$

$$\mathbf{W} = \mathbf{RT} \int_{\mathbf{V}_1}^{\mathbf{V}_2} \frac{d\mathbf{V}}{\mathbf{V}}$$

$$= \mathbf{RT} \left[ \mathbf{InV} \right]_{\mathbf{V}_1}^{\mathbf{V}_2}$$

$$= \mathrm{RT} \; [\mathrm{InV}_{\; 2} - \mathrm{InV}_{\; 1}]$$

$$\mathbf{W} = \mathbf{RTIn} \frac{\mathbf{V_2}}{\mathbf{V_1}}$$

$$\mathbf{W} = \mathbf{2.303} \mathbf{RT} \log_{10} \frac{\mathbf{V}_{2}}{\mathbf{V}_{1}}$$

for constant temperature

$$\frac{\mathbf{P_1}}{\mathbf{P_2}} = \frac{\mathbf{V_2}}{\mathbf{V_1}}$$

So, also

$$\mathbf{W} = 2.303.\mathrm{RT}\log_{10}\frac{\mathbf{P_1}}{\mathbf{P_2}}$$
