The trees and other plants that form a part of the forests create an environment that is healthy for the breeding several species of animals. These are thus a habitat for a large variety of wild animals and birds. Different types of forests grow in different parts of the world. These are mainly divided into three categories. Rain forest, coniferous forest, and deciduous forest. Forest form an important part of the ecological system mainly because they aid majority in biodiversity. A large number of birds and animals survive only because of the presence of forest. However, unfortunately forests are being cut a rapid speed to serve

various purposes. The increase in the demand of various commodities derived from the trees that grown in different forests and the need to accommodate the growing population are among the major reasons of deforestation. It is important to realize that forests are essential for the survival of the mankind. Forests help in purifying the atmosphere, aid in climate control, act as natural watershed and area source of livelihood for many people. Forests must thus be preserved. Deforestation is a global issue and effective measures must be taken to control this issue.

In bulk, doth make man better be;
Or standing long an oak, three hundred year.
To fall a log at last, dry, and sere;
A lily of a day
Is fairer far in May,
Although it fall and die that night-
It was the plant and flower of light
In small proportions we just beauties see;
And in short measures life may perfect be.*
