TEST - V
ENGLISHLANGUAGE

Read the following passage carefully and answer the questions given below it. Certain words have been printed in **bold** to help you locate them while answering some of the questions.

Rocketing food prices have **sparked** riots in numerous countries recently. Millions are **reeling**from the price rise and governments are scrambling to halt a fast-moving crisis before it spins out of control. From Mexico to Pakistan, Senegal and Mauritania, protests have turned violent. In many poor countries, the protests have been fuelled by pent-up anger against authoritarian or corrupt officials, some of whom have earned fortunes from oil andminerals while locals are struggling to buy food. Protesters burned hundreds of food-ration stores accusing the owners of selling government-subsidized food on the lucrative black market. "This is a serious security issue," says Joachim von Braun, Director General of the International Food Policy Research Institute (IFPRI), in Washington. He has been bombarded by calls from officials around the world, all asking one question: How long will the crisis last?

The forecast is **grim**. Government might **quell** the protests, but bringing down food prices couldtake at least a decade, food analysts say. One reason: billions of people are buying ever-greater quantities of food-especially in booming China and India, wheremany have stopped growing their

own food and now have the cash to buy a lot more of it. Increasing meat consumption, for example, has helped drive up demand for grain, and with it the price. There are other problems too. The spike in oil prices, (an unbelievable $ 109 per barrel), has pushed up fertilizer prices, as well as the cost of trucking food from farms to local markets and shipping it abroad. In China, where food prices have soared 23% in a year, officials have frozen the price of fertilizer and boosted farm subsidies, in an effort to lower pork and wheat prices and avert possible protests. But the problems do not end there. Harvests have been seriously disrupted by freak weather, including pro- longed droughts in Australia and Southern Africa, floods in West Africa, deep frost in China and record-breaking warmth in Northern Europe. The **push** to produce biofuels as an alternative to hydrocarbons in further straining food supplies, especially in the U.S., where generous subsidiesfor ethanol have lured thousands of farmers away from growing crops for food and increasing the area used for biofuel cultivation. As always in a crisis, there are winners. The creeping fear that the worldmight actually run short of food has led speculators to pour billions into commodities further accelerating price rises.

For the world's poorest people, the price spikes are disastrous. Aid officials say that millions whopreviously eked out enough to feed their families can no longer afford the food in their local stores, and are seeking help from relief organizations. "We are seeing a newface of hunger," says the Executive Director of the U.N.'s World Food Program, "People who were not in the urgent category are now moving into that category." Despite the widespread demonstrations, the food crisis has been largely ignored byNorth American and European officials–who pay formuch of the world's food aid "because no one is starving in rich countries."

Several African countries have begun planting high-protein, pest-resistant rice crops, and aidorganization are beginning to recruit locals for new job programs to help people pay their food bills.

In the poorest parts of Asia and Africa, officials hope that sky-high food prices might lift out ofpoverty small farmers who have barely scraped by on low crop prices–a hope that would get a bigboost if the rich world agreed to cut agricultural subsidies in the current round of trade talks.

Kenya is one of the few African countries which has held elections regularly **(291)** independence.Its economy **(292)** 6.4%in 2007 and it has been relatively stable till **(293)**. The sudden outbreak of violence and unrest in Kenya lastmonth **(294)** from three root causes. The first is poverty. Despite an overall economic growth, 58%of the population are still poor **(295)** as living on $ 2 a day or less. UN studies show that the gap between the rich and the poor is **(296)** in Africa than the rest of the world. The second malady is corruption. In the list of the world's most corrupt countries **(297)** by the watchdog group Transparency International, Kenya ranks eighth from the bottom. Finally Kenya's democratic institutions remain **(298)**. Voters are to some extent **(299)** in undermining democracy–when they are given an opportunity to vote out corrupt leaders they do not exercise their voting rights. Part of the answer lies in holding African Governments **(300)** for the corruption andmisrule. However, the emergence of amore peaceful and prosperous Africa depends on the Africa people themselves.
