Below is given a passage followed by several possible inferences which can be drawn from the fact stated in the passage. You have to examine each inference separately in the context of the passage and decide upon its degree of truth or falsity.

Mark answer a) if the inference is **'definitely true'**, i.e. it properly follows from the statement of facts given.

Mark answer b) if the inference is **'probably true'** though not 'definitely true' in the light of the fact-given.

Mark answer c) if the **'data are inadequate'**, i.e. from the facts given you cannot say whether the inference is likely to be true or false.

Mark answer d) if the inference is **'probably false'**, though not 'definitely false' in the light of the facts given.

Mark answer e) if the inference is **'definitely false'**, i.e. it cannot possibly be drawn from the fact given or it contradicts the given facts.

In a mature market economy, finance must interact productively with the decision making of private economic agents and shape the resource allocation emerging out of these decisions as efficiently as possible. But Indian finance has a history of financial preemption. Formerly, the task of finance was seen as mobilizing resources for the implementation of socialism at two levels : first, to fund fiscal deficits on below market terms and second, to direct the supply of resources into socially important areas under the guidance of planners rather than the rules of the market. Most policy making in finance in past decades, has been shaped by financial repression, i.e. forcing finance to allocate resources based not on economic efficiency but to channel it in ways sought by the state. Strong elements of financial repression continue to be in place; e.g. the lack of a properly functioning bond market. Flaws in competition policy, segmentation and barriers to innovation, are rooted in this deeper system of appropriation by the state of financial resources.

**Q.81.** Financial policymakers in India have successfully allocated resources to different sectors.

**Q.82.** Bond market in India is yet to achieve an effective role in financial system.

**Q.83.** Allocation of resources in India is governed by market economy.

**Q.84.** Financial policymakers in India attach more importance to fulfill social objectives than objectivity.

**Q.85.** Financial policymakers in developed countries allocate resources on strong financial parameters.

**Production of six types of car produced by a manufacture for year 2005 & 2006 (in thousand)**

Q.96. For which type of car was there a highest percent decrease in production from 2005 to 2006?

- a) B
- b) C
- c) E
- d) F
- e) None of these

Q.97. What was the difference in the number of B type cars produced by the manufacturers between 2005 and 2006?

- a) 5,000
- b) 20,000
- c) 10,000
- d) 2,500
- e) None of these

Q.98. The number of D type cars produced in 2005 was **approximately** what percent of the number of E type cars produced in 2006?

- a) 94
- b) 90
- c) 85
- d) 105
- e) 100

Q.99. For which type of car was there a highest percent increase in production from 2005 to 2006?

- a) A
- b) B

- c) E
- d) F
- e) None of these

**Q.100.** The total production of which of the following types of cars in 2006 was exactly equal to the production of E type cars in 2005?

- a) B and A
- b) B and E
- c) E and D
- d) F and C
- e) None of these

**Q.101.** Three-fourth of two-third of one-sixth of a number is 15. What is 30 percent of that number?

**TEST - III**

**ENGLISH LANGUAGE**

Read the following passage carefully. Certain words in the passage are printed in **bold** letters to help you locate them easily while answering some of these questions.

Definitions of fasting vary. A day without meal is a day of fasting. Some think fasting means **skipping** one meal, others think it's eating just one. It could be **partaking** of water and bread stuffs only; clear liquids only; or 'liquid diet foods' only. For a time in the sixties, you could call it fasting if you **ingest** anything liquid. According to nutritionists, a fast means no food whatsoever and no liquid except water. And if it is for less than **24 hours it isn't** a fast, it's skipped meals. Fasting allows the digestive system to rest and heal itself. The body **eliminates toxins**. It gives body a rest; it does not have to process the food it would otherwise be exposed to. There is a lot of scientific data showing that the most likely way to extend life is to **restrict** calories. Food is an ongoing requirement; the human body is designed to process it. Expecting your body to function in **full gear** without refueling is like assuming your car will run on an empty tank. If you eat right, your system isn't going to be overworked in the first

place. Eating right means 'variety and **moderation**' all the time. But 'variety' doesn't mean **variety** of your pattern of eating; it doesn't mean food today, no food tomorrow.

A lot of people regard fasting as good for the soul, but it certainly isn't good for the body. Going from food to fast shocks the system. Fasting lowers glucose by 50 percent after 24 hours, and that's a lot of stress on the system. **Twenty - four hours without solids is okay now and then - provided that you take adequate water** in those twenty four hours and eat a well-balanced, nutritious variety of foods throughout the week. Fasting one day a week, or a month clears the digestive system. But a better choice, is to cut **calories** by 50 percent by eating nutrient **dense**, plant-**source** foods regularly, as an ongoing lifestyle.

**Q.126.** What is real conception behind fasting?
